

Biofuels Refinery Project

Reno, Nevada Biorefinery

Many of our customers are looking to the future with bio-refining options to expand and diversify their energy offerings.

From start to finish, C2C has been a key component of the construction, quality control, commissioning, and maintenance of one of the nation's first refineries that use municipal solid waste as its feedstock. The agility and experience of our team enabled us to adapt and address our company's best practices with this new type of facility.
